Caged Petunias on Burpee's Floradale Seed Farms. Plants of exceptional superiority are protected from insect pollination as part of Burpee's program of breeding new and better varieties.

Pollen must be transferred by hand from one parent to the other to produce seed of the wonderful new F₁ Hybrid Petunias. This is an expensive operation, but the resulting seed is well worth it.

are particularly noteworthy because of their desirable, uniformly upright, compact habit of growth; also because they come into bloom extremely early.

Flowers are globular, double, 3 to 4 in. across, with attractively incurved petals somewhat resembling the American Beauty asters in shape. Ideally suited for cutting and garden purposes.

Burpeeana Early Aster plants are erect, base branching growth (see picture below), average 20 in. in height, with many stems per plant. Burpee's Tetra Snaps

Giant Ruffled Tetraploid Snapdragons

ALL ORIGINATED ON BURPEE'S FLORADALE FARMS

Tetra snaps are a Burpee scientific creation, originated through the treatment of the best regular or diploid varieties with colchicine—a drug or chemical derived from the bulbs of fall crocus. Genetically, they are known as tetraploids, for, when examined under the microscope, they have twice the number of chromosomes in their cells as the regular or diploid snapdragons.

Burpee's Giant Tetra Snapdragons are extremely large and attractively ruffled. Plants are exceptionally strong and husky, with glossy, dark green foliage, thick and almost leathery in texture; the stems are quite heavy. Under general field-conditions the central spikes grow 2 ft. and more in height; these are surrounded by lateral spikes of lesser height. Base branching plants. Tetra Snaps are wonderful for cutting.

3495 Tetra Candlelight Clear, bright yellow, nicely formed, well placed flowers are freely borne on strong, erect spikes. Extremely rich and beautiful.

4267 Tetra Crimson Very large, deep but bright, velvety crimson flowers closely set on long, broad, tapering spikes above dark green, thick foliage.

4269 Tetra Pink Shades Exquisite variations from shell-pink to deep rose. The tapering spikes are filled with large, nicely formed, well placed flowers.

3499 Tetra Shades of Rose Especially selected for those who prefer the clearer, deeper shades of rose for their garden. A most appealing blend.

4258 Tetra White Creamy white changing to pure white with age; primrose throat which adds to the beauty of the large, attractively formed flowers.

SNAPDRAGONS

These exquisite flowers have always been universal favorites for color in the garden, in the greenhouse during the winter, and as cut flowers. Of easiest culture, succeeding best in rich or moderately rich soil—in full sun or semi-shade. The gorgeous flowers are freely produced for several months, and until frost where conditions are favorable. Sow seed outdoors when soil has become quite warm; for earlier blooms sow the seed indoors six weeks before your regular outdoor planting time, and transplant the seedlings when the soil has become warm.

Burpee's Giant PANSIES

Pansies always have been a great specialty with us and we are justly proud of our strains. Their wide range of colors, markings and forms, their easy culture, have made Burpee pansies universally popular. Pansies succeed best in fairly rich, well-drained soil in a sunny position, and produce their finest flowers in the cool, early days of spring. Keep flowers picked during the summer, plants pinched back to produce new growth and flowers in early fall. Seeds may be sown outdoors when soil has become warm; for earlier blooms, start seed indoors or in a hotbed four to six weeks before your usual outdoor planting time.

4222 Floradale Giants Mixed

Burpee's outstanding strain of giant pansies developed over a period of years through breeding, close and careful selection. The range of colors is unusually large, including reds, yellows, blues, etc., the majority attractively blotched with contrasting shades. Many of the blooms are nicely waved and fluted. Plants are well-rounded and profuse bloomers. Unsurpassed blend.

Burpee's Almost WHITE American Marigolds

\$10,000 for a Pure White

We are still looking for a pure white marigold. We have been getting marigolds nearer and nearer to white, but as yet we do not have a pure white one. Will you help us?

Burpee will pay you \$10,000 if you are the first person who sends us seeds that grow the first White Marigold as big as Man-in-the-Moon Marigold, and as white as Snowstorm Petunia. It must be understood that you will not give or sell White Marigold seeds to anyone else, and that all seeds sent to us become the property of W. Atlee Burpee Co., with the exclusive rights to name, introduce and sell, and no seeds can be returned.

If you find a pure white marigold, do not cut the flowers but let them go to seed and send, before March 1, 1960 or 1961, about 100 seeds to us at Philadelphia 32, Pa., Clinton, Iowa, or Riverside, California. We will plant the marigold seeds on our Floradale Farms and the results will be judged by the President of the W. Atlee Burpee Co. and two other distinguished horticulturists. The decision of the majority of the judges will be final, and the results will be announced in our seed catalogs.

In this world-wide search for a pure white marigold, anyone, anywhere, may submit seeds except Burpee employees or their families. It is understood that all seeds submitted for trial are accepted by us only under the above conditions.

3244 Burpee's Miracle Marigolds, Hybrids of Nearest-to-White Selections Pkt. \$1.00

3244 Burpee's Miracle Marigolds

New Hybrids of Nearest-to-White Selections for 1960

Miracle Marigolds will contain many big, fully double, pale primrose flowers, of good form in carnation, peony or chrysanthemum flowered types of American marigolds. Because they are hybrids there will be great variation in color, as well as in other respects, and you will have some wonderful flowers in your garden that no one has ever seen before. And perhaps you may be the one to discover a pure white marigold. The plants vary in height from 2 to 3 ft.

These seeds possess strong nearest-to-white factors, carefully refined by Burpee breeders through thousands of cross pollinations in the hunt for the White Marigold. Making this high quality seed available to gardeners everywhere, enlists thousands of helpers capable of testing a greater number of seeds under various climatic conditions. Different climatic conditions can influence the combination of genetic factors which will produce the White Marigold.

Results of the 1959 "White Marigold" Trials

David Burpee, President, W. Atlee Burpee Co., renewed the \$10,000 offer following the results of the 1959 White Marigold Trials at Floradale Farms, Lompoc, California. Though none of the 254 entries from 32 states produced the desired bloom, the judges made special awards of \$100 to each of five entries which showed exceptional tendencies toward white. Next year may be the last time for Burpee to offer to pay \$10,000.

The \$100 awards by the Burpee Seed Co. were given to Mrs. Tony Joe Cortez, Route 4, Box 150, Pueblo, Colorado; Mrs. Dessie O. McKinney, P.O. Box 23, Mount Summit, Indiana; Mrs. C. H. Root, 931 Wayne Avenue, Greenville, Ohio; Mrs. Henry Saxe, 327 W. Sedgwick Street, Mt. Airy, Philadelphia 19, Pa. and Mrs. Ophelia White, 505 Richmond Road, Rockingham, North Carolina.

The 1959 "White Marigold" judges, pictured below, from left to right are David Burpee, Dr. V. T. Stoutemyer and Dr. R. E. Larson. White Marigold Judge Dr. V. T. Stoutemyer, Chairman, Department of Floriculture and Ornamental Horticulture, University of California, expressed amazement at the rapid progress made in the short period of five years by Burpee toward developing a pure White Marigold. Dr. R. E. Larson, head of the Department of Horticulture, Pennsylvania State University, complimented the keen observation and interest displayed by American gardeners in selecting Marigolds that are very near to white.

MARIGOLD THE AMERICAN FLOWER

When Cortez conquered Mexico he found Marigolds growing in the gardens there. Marigolds are native to southwestern United States and Mexico.

Cortez took seed to Europe and they rapidly became the favorite flower for the devout to place at the altar of the Virgin Mary. This is how they got the name, "Mary's Gold", and then "Marigold." The big ones (*Tagetes erecta*) used to be called African Marigolds, but now we call them American, which they are. The little one (*Tagetes patula*) are called French Marigolds, although they also are natives of the American continent and nowhere else in the world.

Our president, David Burpee, has suggested that Congress adopt the American Marigold as our National Floral Emblem. The United States is the only great country in the world that does not have a National Flower. Others have suggested the Rose, Carnation, Corn Tassel and Grass. But for hundreds of years the Rose has been the floral emblem of England, and it is the floral emblem of eight other countries, four of which have fallen behind the iron curtain since selecting the Rose as their emblem. The Carnation is the national floral emblem of Spain. The Corn Tassel is not a perfect flower and is not grown especially for its beauty. As for grass, who would want to walk on the National Floral Emblem?

The American Marigold has much in its favor—it is easy to grow from seed and does well in every state of the Union, even as far north as Alaska and in the tropical clime of Hawaii. The Marigold can be an ambassador of good will for the United States to every civilized country in the world for it is popular in all of them. It is called by some, "Flower of Good Luck" or "The Friendship Flower."

Burpee's Giant Fluffy Marigolds—Flowers 3 to 3½ in. across

Giant Fluffy Marigolds are a delightful type of chrysanthemum-flowered marigolds. The well-rounded flowers of Yellow Fluffy and Golden Fluffy have gracefully interlaced, loosely arranged petals which gives them an informal, graceful, "fluffy" appearance.

Fluffy marigolds are available in the best marigold colors—bright yellow, golden and deep orange. The giant double flowers, 3 to 3½ in. across, have excellent centers and are borne on strong stems well above the foliage. They are wonderful for cutting and are most attractive in the garden alone or combined with others.

Giant Fluffy Marigolds are one of the earliest types of all American Marigolds, blooming abundantly from early midsummer until killing frost. Plant habit is upright, vigorous and quite uniform. Grow 2½ ft. tall.

4431 Yellow Fluffy Bright canary-yellow, fluffy heads.

Improved CALENDULAS

Scotch or Pot Marigolds

These calendulas are far superior to the old-fashioned varieties in many respects; the flowers are larger, longer stemmed, fuller and of richer colors, and therefore are better both for cutting and garden decoration. Of the easiest culture, succeeding in ordinary, well-drained soil and, where summers are not too hot, plants will bloom from early summer until frost and furnish an endless supply of long-lasting cut flowers. Sow seed in early spring. In hot sections, another sowing may be made in early summer to furnish blooms in the cool fall days. Plants grow 15 to 24 in. tall, depending on the variety used and the locality in which it is grown.

The plants grow from $1\frac{1}{2}$ to 2 ft. tall.

First Generation F₁ Hybrids

The seeds are obtained at such high cost by hand-pollination that they are worth many times their weight in gold. Extra care should be used in sowing them. Start seeds indoors in shallow boxes, pots or seed-pans eight weeks before your usual outdoor planting time. All are excellent for beds, borders, window boxes, pot-plants and cutting. Their clear, rich colors and good flower substance and form are a delight to all gardeners. The healthy, sturdy plants hold their shape for a long time and have good garden appearance.

3374 Allegro Beautifully fringed, full double flowers $3\frac{1}{2}$ to 4 in. across, scarlet-salmon in bud opening to an exquisite bright, deep salmon. Plants are 12 in. tall, with spread of 2 ft. across. A lovely, base branching, free blooming dwarf.

SCABIOSA—Pincushion Flower, Mourning Bride

Called Pincushion Flower because the stamens of some varieties are light in color and stick out in contrast to the petals so that they resemble pins stuck in a cushion. Bloom from midsummer until frost if flowers are not allowed to go to seed. Prized for cutting.

STRAWFLOWERS AND OTHER EVERLASTINGS

With the exception of Job's Tears, *Briza maxima* grass and Honesty, the varieties listed on this page are desirable for use as fresh cut flowers, and largely grown to dry for winter bouquets. Job's Tears is an annual grass grown for its grayish white seeds which are strung as beads. *Briza maxima* holds its panicles when dried and may be used alone or with dried flowers. Gourd fruits, when dried, are used for ornaments. Honesty is prized for its satiny, parchment-like partitions of the dried seed pods. The best method to dry the flowers and *Briza maxima* grass is to cut the material before it is fully developed, remove foliage, bunch loosely, and hang head downward in a cool, airy, shady place. The flowers of Bells of Ireland, page 19, and *Celosia* (Cockscorn), page 22, also last a long time if dried as you would everlastings. Flowers should be fresh and free from water. Dry them slowly and never over artificial heat.

The first and only F₁ Hybrid Zinnia

Brilliant red, medium-large double and semi-double flowers are borne freely on strong bushy plants 2 ft. tall. Excellent for both garden and cut flower use. Most of the flowers are semi-double and show a bright yellow center in pleasing contrast to the bright petals.

The main value of Trail Blazer, however, is that it is highly **resistant to mildew**, a disease which often affects the foliage of other Zinnias.

While we expect to have better first-generation hybrid Zinnias within a few years, we know that this year many of our customers will want to grow Trail Blazer, the only one available as yet. The seed, being hybrid, is very expensive to produce, but we are charging only 50¢ a packet for Trail Blazer. Pkt. (50 seeds) 50¢;

BURPEE PERENNIAL FLOWER SEEDS

Perennial flowers are the hardy, permanent ones that live for years. Plants grow to the flowering stage each year and die down again to the roots, which remain alive but dormant until the next season. Some perennials will flower the first year from seed if it is sown early, although two seasons are usually required. Seeds sown early make stronger plants to go through the winter and give more bloom the next season. Cultural directions are on every bag. We have included also the best of the biennials, seed of which is sown one year, the plants blooming the second season, after which they die.

Dear Fellow Gardeners:

It occurs to me that you may be interested in knowing more about the Burpee Seed business.

In 1876, when my father, W. Atlee Burpee, was only 18 years of age he started this business with a small seed store in Philadelphia. In those early days, most of the seeds for American gardens were imported from Europe. Father knew that to build a successful business he had to supply gardeners with the best seeds that grow. Therefore he started our Fordhook Farms in Pennsylvania for flower and vegetable research in 1888, before the United States Government had any experiment stations.

Father tested seeds from all over the world and selected the best for his customers. Then in 1909, he started our Floradale Farms—the first seed farms in the Lompoc Valley, Santa Barbara County, California.

Each summer father spent three months traveling over Europe and the United States, selecting and testing flowers and vegetables for gardens in every part of America.

At first it was mostly a matter of finding improved varieties. Father found in Europe, and was the first to name and introduce in this country, superior varieties that still are amongst the most popular, such as Copenhagen Market Cabbage and Golden Self-Blanching Celery. And in America he found and was the first to introduce Golden Bantam, the most popular Sweet Corn; and the most famous of all Bush Lima Beans, Fordhook and the Burpee Improved.

Now, in addition to searching for new and better varieties of vegetables and flowers, we create them by modern scientific methods, and Burpee's American-grown seeds are planted in practically every civilized country in the world.

The first hybrid vegetable seeds in America, such as Tomatoes, Cucumbers, Eggplant, Zucchini Squash, and Cantaloupe, were produced through research on our Fordhook Farms in Pennsylvania. Burpee was also the first American seedsman to produce hybrid seeds of flowers such as the Alldouble and Single Hybrid Petunias, Hybrid Marigolds, and Hybrid Zinnias. And the first Tetraploid flowers such as the Giant Ruffled or Tetra Snapdragons came from our Floradale Farms.

My introduction to the seed business was through traveling with father, taking his notes, and working with him on our Fordhook Farms where we lived, and where I still live. All of this close association was of great benefit to me, for on father's death I was better able to take charge of the business. A year later, my brother joined me, and now my son and my brother's son are seedsmen, too.

The fact that we supply gardeners with the finest quality flower and vegetable seeds is the reason for the success of the Burpee business. And to continue to supply you with the best seeds and bulbs always will be our purpose.

It is our hope that the best gardens always will be planted with Burpee Seeds.

Sincerely,

David Burpee

Burpee Wins 1960 All-America Awards for Three Different Classes of Flowers

ANNUAL PHLOX

Glamour, newest of the Tetras and aptly named, earned the Bronze Medal. It really should be seen to be appreciated for neither words nor pictures seem to do justice to its showy clusters of glamorous mid-salmon flowers. The individual flowers are large; plants only 14 in. tall. Being a tetraploid, *Glamour* is vigorous, uniform and free flowering—a joy for garden or cutting. See opposite page.

MARIGOLD

Winner of a Bronze Medal is *Toreador*, newest of the Giant F₁ Hybrid American Marigolds. This bright orange beauty is the spectacular companion to Yellow Climax and Golden Climax, all true first generation (F₁) hybrids with huge, fully double flowers of unusual grace and charm. *Toreador* brings you a giant marigold with all the virtues of a perfect flower. See inside front cover.

SNAPDRAGON

Vanguard, one of a new race of giant, first-generation (F₁) Hybrids called Burpee Supreme Snapdragons, won a Bronze Medal—the first double Snapdragon to ever get an All-America award! *Vanguard* is the finest snap we have ever seen—beautifully tapered long spikes filled with exquisite double flowers of cerise-rose enhanced by yellow markings. See front cover and page 9 which describe this sensation.

Burpee IS THE LEADER IN CREATING NEW AND BETTER ANNUAL FLOWERS FOR GARDENERS EVERYWHERE

Annals, because they bloom the same year from seed planted in the spring, offer the quickest and most profuse color to glorify a garden, and actually take the least care of any kind of flowers to grow to perfection.

No other seedsman in the world has created and introduced as many new, improved annual flowers as Burpee. It is largely the creative work at Burpee's Fordhook and Floradale Seed Farms that transformed the once lowly

marigold and zinnia into the gorgeous beauties they are today. Burpee introduced the first Tetra or Tetraploid flowers, and also created and introduced the first true first generation (F₁) hybrids in America. Because of Burpee's continuous research to breed better flowers as well as vegetables, gardeners look to Burpee for what is new—new colors, new types, better plant habits. On the following pages you will find the best to be had in annual flowers.

LETTERS POUR IN FROM EVERY STATE TELLING OF GARDENERS' SUCCESS WITH BURPEE SEEDS

"—Burpee Big Boy Tomatoes—2 entries at County Fair (Adams County) won 1st and 2nd out of 20 entries exhibited. The judge said they are the best tomatoes he had ever judged. Also won 1st in garden display (Big Boys helped). . . ." William E. Adams, Liberty, Ill.

"—I planted Yellow Climax Marigolds last year and have never seen flowers more beautiful and long-lasting. . . ." Mrs. Dale C. Cameron, St. Paul, Minn.

"—I just want to let you know that I grew your Gloriosa Daisies and they are really beautiful. Two plants have more than 60 flowers. . . ." Mrs. Anna Schifner, Williamstown, N. J.

"—The only kind of seeds we use is 'Burpee.' We have farmed for 20 years and always bought Burpee Seeds. Dad with his Burpee Vegetables, and Mother with her Burpee Flowers would always come in 'Class A' at the county fair. . . ." Mrs. Elizabeth Puskas, N. Canton, Ohio.

"—Have never had any flowers that have given me as much pleasure as your Gloriosa Daisies; you do not praise them half enough. Never did we have such long lasting cut flowers; some have lasted as long as four weeks. . . ." Mrs. Lulu Disbennett, Johnstown, Ohio.

"—Climax far surpasses any other marigold in size of bloom, hardiness, foliage, insect resistance, and length of blooming period of any marigold that I have ever grown. The cut flowers stay fresh from ten days to two weeks. From twenty-four plants I have already cut over four hundred blooms, and more buds are still coming. . . ." E. D. Lyles, Denton, Texas.

"—I had to write to tell you what wonderful success I've had with your Climax Marigolds. They are truly wonderful. My garden is the envy of the neighborhood and most people can't believe that they are marigolds. They look like huge mums. . . ." Mrs. C. A. Holub, Chicago, Ill.

"—I want to tell you of my crop of cucumbers raised last year from four hills of No. 6023 (Burpee's Hybrid Cucumber). I am sure if I had measured my pickings, I would have had 20 bu. . . ." Mrs. Leonard Brian, Waverly, Ill.

"—Climax turned out to be a real Aristocrat. I have never seen such beautiful marigolds and I've raised marigolds the last thirty years. Some plants have thirty or more blooms and lots of the flowers are six or more inches across. . . ." Miss Marie Volpe, Nutley, N. J.

"—I plant only the Big Boy variety now because I find the tomatoes are firmer and larger. . . ." Hugh Frank Smith, Memphis, Tenn.

BURPEE'S Famous Vegetable Seeds

GROW YOUR OWN VEGETABLES

The vegetables you grow, if used when they are in prime condition, will be fresher, taste better and contain more vitamins and minerals than those usually bought at the store. To enjoy the flavor of vegetables at their very best, they should be cooked as soon as possible after being picked. Many of today's best vegetables were first introduced by Burpee.

Vegetable Seeds and Roots are Sent Prepaid anywhere in the U. S.

Maturity Dates

The average number of days required from the time the seed is sown until vegetables are ready for use is given with each variety. Where plants must first be grown, such as Celery, Cabbage, Peppers, Tomatoes, etc., the number of days to maturity is from the time plants are set in the garden. Of course, the time is average, having been obtained over a period of years in our trial grounds under different conditions; some variation is to be expected, depending on the season, locality and time of sowing. The approximate maturity dates given will show the relative time when different varieties will be ready to use.

Follow the Bull's Eye ☉

We have used this mark, ☉, for years to guide the gardener in the selection of vegetable varieties which we believe will give the best results under varied conditions of soil and climate. We have reprinted an old woodcut which appeared in early Burpee Seed catalogs, the forerunner of our present symbol. This mark, ☉, usually called a bull's eye, was used by the ancient alchemists to represent gold. It therefore is most appropriate for indicating the varieties which we consider the best of their class. If you are not thoroughly posted on which varieties to choose for your section, we suggest you select those marked with the bull's eye.

Burpee's Brittle Wax Bush Bean

Bush Snap Beans

Before the introduction of stringless bush beans, green and yellow podded varieties were known as string beans and this name, unfortunately, seems to remain in many localities. Now that strings and tough fiber have been bred out of these varieties, we are referring to them as snap beans. Take a pod, green or yellow, break it quickly and see how it snaps. Pods are most delicious, raw or cooked, if picked when quite young and tender. They have more vitamins than, are better for you and, of course, they taste better. A pkt. of seed will sow about 25 ft. of row; one lb. will sow about 150 ft.

Red Kidney and White Marrowfat are grown mostly as dried beans for winter use; Dwarf Horticultural for green shelled beans, although pods may be used, when young, as snap beans. The bushes are then cut, allowed to dry, and the beans threshed and thoroughly dried out before they are put away for later use. A pkt. will sow about 25 ft. of row; one lb. 150 ft. of row. Many pole beans listed on page 65, are also desirable as shell beans.

Climbing or POLE BEANS

Young pods make delicious snap-shorts; also popular as green or dried shell beans. To many persons, pole beans have that good bean flavor that is lacking in some varieties of the bush type.

Pole beans come into bearing later than bush beans, yield more heavily over a longer period and some produce bigger pods. They do best if the vines, which grow 5 to 8 ft. and more high, are given support, the most frequently used being rough poles, although they may be planted 3 to 5 in. apart along a trellis or fence or along a series of strings on which they may be trained.

A pkt. of seed is enough for 15 poles; one lb. for 100 poles or 300 ft. of fence, trellis or string.

Bush Lima Beans

Easier grown than pole limas as plants do not need support. There are varied sizes and shapes of beans to meet your preference, whether it be the large thick (Burpee's Fordhook) or small thick "potato" type (Baby Fordhook), the large flat (Burpee's Improved) or the small flat baby butter lima (Henderson Bush). Some prefer one type for eating fresh, another for dry beans or freezing. We list the best varieties for the purpose. THE EFFECT OF SEASON, LOCALITY, ETC.

Throughout the vegetable section of this catalog, we have given the approximate maturity dates and other comparative information about varieties, such as their size, shape, etc. It should be understood that weather conditions, climate, soil, locality and time of sowing may affect any or all of these characteristics. The approximate maturity dates given will show the relative time when different varieties may be expected to be ready to use.

Burpee's Surehead Cabbage

Cabbage is easily grown and may be eaten raw as cole slaw or cooked in different ways. While the smooth leaved varieties are the most popular, some prefer the green savoy crumpled leaved (Perfection Drumhead); others, the deep purplish red (Mammoth Red Rock); some, the round heads (Copenhagen Market); others, the Pointed (Early Jersey Wakefield) or flat (Premium Flat Dutch). We have the best kinds to meet your choice. Some of the midseason and late varieties make excellent kraut; all the late varieties are desirable for fall use and winter storing.

A pkt. of seed will produce about 125 plants; oz. about 3000 plants. Days to maturity represent the average time required from setting the plants in the garden until cabbage is ready to use.

Carrots

Sow seed thinly in early spring in rows not less than 12 in. apart and make additional sowings when the preceding planting is up and growing. Cover the seed with ½ in. of fine soil. Thin the small early varieties to stand 2 in. apart in the row and the larger, later varieties from 2 to 3 in. A rich, mellow, deeply worked soil gives the finest carrots. The later sowings will produce nice, tender carrots in the fall.

There are varied sizes and shapes of carrots to suit your purposes and soil; Burpee's Oxheart with its stocky, heart-shaped roots especially suited for shallow or heavy soil to Imperator for deep mellow soils—the popular medium length carrot for all general purposes is Goldinhardt. Cantaloupes

To really enjoy a cantaloupe, fruits should be allowed to fully ripen on the vine for, with the exception of Honey Dew, they do not become sweeter in flavor after being picked. Fruits are ripe when the stem, attached to the melon, will slip from it with a slight touch of the thumb. If the stem does not slip off easily, the melon is not ripe and should remain on the vine. Many persons can select ripe melons by their aroma. A pkt. of seed (except Burpee Hybrid) will plant 12 groups, 1 oz. 120 groups or so-called "hills."

SWEET CORN loses its sweet flavor rapidly after picking. To enjoy it at its best, it should be home grown and eaten as soon as possible after ears are pulled. Take husks off promptly and if necessary to keep corn for a short time put the husked ears in transparent bags and keep at a 40 to 50° temperature until ready to use. Whether you grow yellow or white grained corn is a matter of preference as is the selection of hybrids or open pollinated, the so-called standard varieties. It is not advisable to save seed from plantings of any hybrids because there will be a reduction in yield the next year. A pkt. of seed will plant 4 rows, each about 25 ft. in length; 1 lb. will plant 300 groups or "hills."

Burpee's Peppy Pop Corn Hybrid

Burpee Hybrid Cucumber has such high resistance to mosaic and downy mildew it out-yields standard varieties

6023 Burpee Hybrid ☉—First Generation (F₁) Hybrid

60 days. **Burpee Hybrid** is a high-class cucumber for all gardeners and all purposes. High resistance to mosaic and downy mildew are the outstanding attributes of this true, first generation (F₁) hybrid, white spine, slicing type cucumber. In addition, the yielding ability of the hybrid has been greatly increased over the standard varieties. The vines are extremely vigorous, long lived and bear an abundance of well formed, straight, dark green fruits of handsome appearance. They will grow 8 in. and more long, 2 1/2 in. wide, square at both ends with medium seed cavity and crispy, white flesh of excellent quality.

Burpee Hybrid is one variety that should be planted early—as soon as possible after the soil is thoroughly warm. And, don't think you have to give up growing cucumbers if your garden is very small. Cucumbers are natural climbers and may be grown on a fence or trellis.

CUCUMBERS

Cucumbers may be harvested at almost any age depending on what purpose the fruits are intended. Different sizes may be picked at the same time, small ones for sweet pickles, larger ones for bread and butter pickles, slicing or dill pickles. Many gardeners prefer to plant the larger fruited varieties for table use and the pickling types and gherkins for relishes or pickles.

Cucumbers, sliced unpeeled, make for a more attractive salad and it has been said that if you eat them with the skin on you may not be troubled with that after-taste which some persons experience.

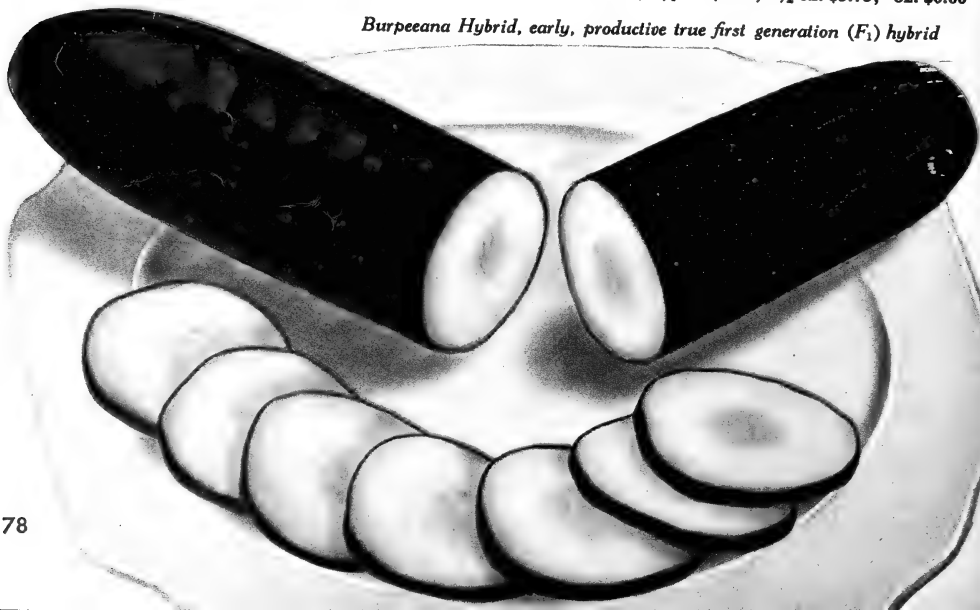

A pkt. of seed will plant 15 groups; 1 oz. 50 groups or so-called "hills." Seeds may also be sown in rows 4 to 5 ft. apart, 4 to 6 in. apart in the row; later thin the plants to stand 12 in. apart in the row.

6274 Burpeeana Hybrid ☉—Early (F₁) Hybrid

58 days. A true first generation (F₁) hybrid that is sharing the popularity of Burpee Hybrid Cucumber. It is vigorous, productive, early maturing—a few days earlier than Burpee Hybrid—and continues production over a long period. The fruits are 8 to 9 in. long, 2 1/4 in. wide; cylindrically shaped, with rounded ends, straight and of very even size. Very dark green, with none of the speckling found in other hybrids now on the market.

Explanation of White Spine and Black Spine

Cucumbers are divided into two families, "White Spine" and "Black Spine." The spines are the miniature stickers that protrude from the warts when fruits are young. White spine cucumbers turn to a creamy white when old; black spine varieties turn to a yellowish orange when matured. Pickling cucumbers are black-spined; all others, with the exception of Improved Long Green, are white-spined.

EDIBLE-PODDED or SUGAR PEAS

THE PODS ARE COOKED AND EATEN LIKE SNAP BEANS

Sugar Peas possess the tenderness and fleshy podded qualities of a snap bean and the flavor and sweetness of fresh green peas. When young the pods are cooked like snap beans; the peas are not shelled. At this stage, pods are stringless, brittle, succulent and free of fiber or parchment. HYBRID TOMATOES

Hybrid Tomatoes are strong, vigorous growers and have the ability to outyield regular varieties, the extra quantities coming, in large measure, from the soil. It can be readily understood that because Hybrid Tomatoes can produce larger plants and higher yields they must be fed more than standard tomatoes. Tests have shown that hybrid tomato seedlings started in 4 in. pots or 4 x 4 in. bands, produced earlier and heavier yields than those started in 2 1/2 in. pots or 2 x 2 in. bands when transplanted to the garden. To produce a maximum crop of large fruits, we recommend that you maintain good fertility and moisture in your soil. For this purpose, it is desirable to make your fertilizer application at the time of transplanting and, if possible, cover the ground around the plants with well-rotted manure when plants begin to bloom. Water during dry spells.

Each seed of an F₁ Hybrid Tomato and other F₁ hybrid vegetables is produced by carefully controlled crossing by hand of two distinct parent lines. This requires a great deal of work and entails a heavy expense but the resulting seed will produce a hybrid of extreme vigor, more uniform in growth, with bigger yields and better quality. We strongly urge that special care and attention be given to the sowing of the seed and the growing of the crop.

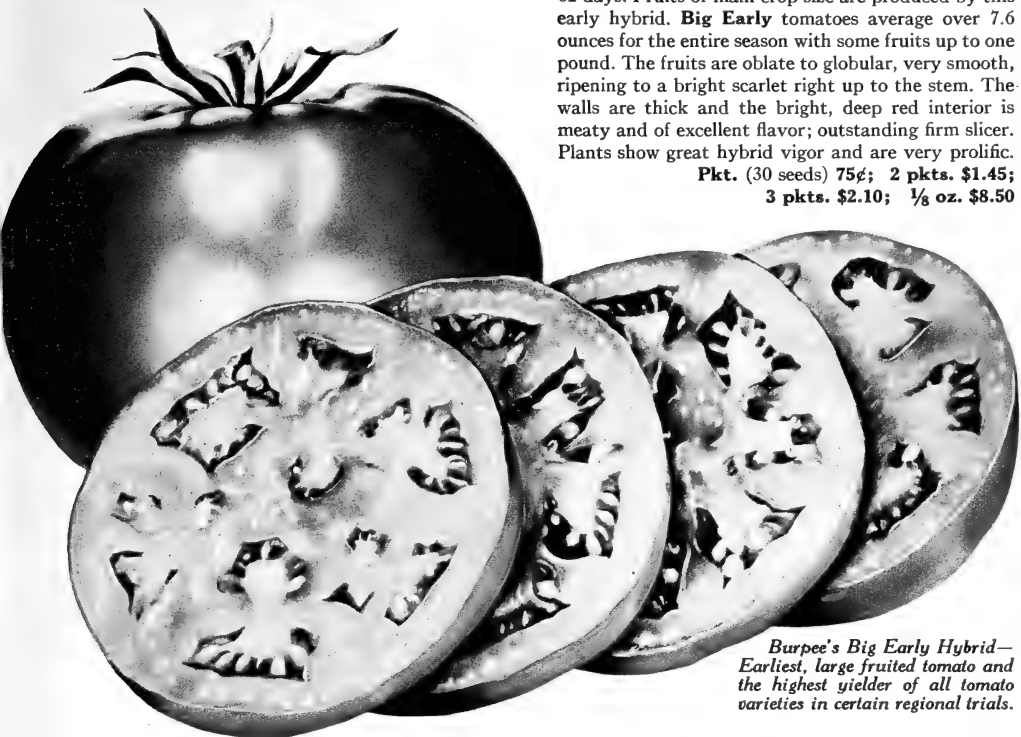

Customers have written us, "I bought a packet of your Hybrid Tomato Seeds, 30 seeds for 50¢, and grew more than 30 plants. How can you explain this?" There are two explanations—first, Burpee Seeds Grow, and second, we always try to give our customers more than they expect.

Big Boy is at its peak of performance in midseason, although large fruits are produced late in the season when many standard varieties decline in yield and size. Ideal hybrid for all purposes; it is so wonderful that the demand for seed is greater than for any other vegetable that we list.

Plants are very large, extremely vigorous, semi-upright to spreading with moderately dense foliage that protects the fruits from sunscald.

Sizes and Weights of Tomatoes

given in our descriptions are for the general field-run of fruits. Customers often write us that they have produced tomatoes bigger than we state they will grow. This is not surprising for with special care, proper fertilizing, watering, pruning, staking, etc., they may easily do better than we claim. This might readily apply to other vegetables.

Tomatoes belong in every garden—they are easily grown and produce quantities of fruit for the space occupied. Picked when sun ripened, they have a flavor unequalled by any you may buy. As they can be served in so many different ways, one never seems to tire of them.

A pkt. of standard tomato seeds will produce about 100 plants; one oz. 5000 to 6000.

Large Pink TOMATOES

For years it has been customary to refer to the following varieties as pink fruited; the only difference between a red tomato and a pink tomato is the skin color. The meat of large pink tomatoes is fleshy and contains few seeds.

The sweet fleshed peppers are desirable for slicing, salad and stuffing; they come in different forms—some blocky (Burpee's Fordhook), some heart-shaped (Burpee's Early Pimento), and another like a tomato in shape with a very mild flavor (Burpee's Sunnybrook). Hot fleshed peppers vary in shape from those resembling a cherry to the extremely hot little tabascos and the long red cayenne. They are red when ripe. Fine for sauces, flavoring and pickling.

A pkt. of seed will produce about 50 plants; 1 oz. 1500. Days mentioned in descriptions represent average time required from setting of plants in the garden until the first fruits are ready.

6661—SPECIAL: One pkt. each of these 50¢
3 excellent radishes, value 65¢ for only

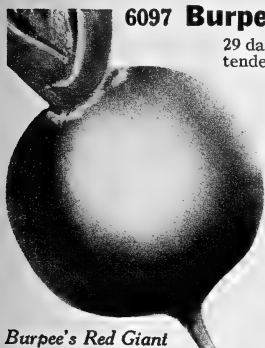

Radishes do best in loose, deeply prepared soil and when growth is quick and steady. Sow seed of the earliest and mid-season varieties as early in the spring as soil can be worked. Make additional plantings when the first planting is up and well started. Sow until early summer, then a month before frost. Length of tops, color of roots may also vary with soil, depth of planting and time of sowing. A pkt. of seed will sow about 20 ft. of row; 1 oz. 100 ft. When sowing beets, carrots, parsley and parsnips, mix in a few radish seeds to mark the rows where the slower-growing vegetables were sown. As the radishes are harvested it will tend to thin out the other crop.

PARSNIPS

Tender and delicious late in the fall especially after a frost which adds sweetness to the flavor. A favorite way to serve parsnips is to parboil them, turn gently in brown sugar and butter so as to glaze them to an appetizing reddish gold and to serve them alone or with broiled ham.

Roots may be stored for winter use, or some may be left in the ground and dug whenever you can get into the soil during the winter or early the following spring. Roots are not injured by freezing and the cold does improve the flavor. A pkt. of seed will sow about 20 ft. of row; an oz. 200 ft.

5284 All American ☉ 95 days. Flesh is white, with small core, tender, fine flavor and superb quality. Roots are smooth, slender, almost white, of medium length, broad shoulder and free from side rootlets. Pkt. 25¢; oz. 45¢; ¼ lb. \$1.15

PEANUTS—Top ranking protein food

It's fun to grow your own peanuts. Roasted peanuts, salted peanuts, peanut butter and peanut candies are well known to all of us. Have you ever tried them baked as you would beans? Leave the skins on or take them off; they are, however, more palatable if the skins are removed. We supply peanuts in the shell.

SPINACH

One of our most wholesome "greens" in the spring and early fall when cool weather is most favorable for its growth. Also suitable for quick freezing. New Zealand Spinach will supply delicious "greens" throughout the summer and fall. It withstands heat, as does Swiss Chard and Tampala. Why not plant some of each class to supply you with vitamin-rich fresh "greens" throughout the season; canned or frozen for winter use.

The number of days from the sowing of seed until spinach is ready to use applies to spring plantings in vicinity of Philadelphia; this varies in different sections and season when sown. A pkt. of true spinach seed will sow 25 ft. of row; 1 oz. 75 ft.

RHUBARB

Victoria Rhubarb

The succulent stems of rhubarb make an appetizing dessert, either stewed or in pies. Never use rhubarb leaves for food purposes. Red-stalked rhubarbs are sweeter and make a sauce that is more beautiful and more delicious than the usual commercial rhubarb. All varieties are prized for canning as well as freezing. In gathering rhubarb stalks, select the larger ones growing on the outside of plant, grasp them firmly near the base and with a slight sideways twist, pull them from the crown.

5308 Victoria Rhubarb from SEED

Stalks are broad, thick, tender, green shaded with red and of a pleasing tart flavor. Heavy yielding, strong, upright grower and reliably hardy. From seed sown this spring, usable stalks will be ready two years hence; for quicker results plant roots. A pkt. of seed will sow 10 ft. of row; oz. 75 ft. of row.

Pkt. 25¢; oz. 60¢; ¼ lb. \$1.60

RHUBARB ROOTS

Planted in early spring, roots will furnish a moderate cutting of stalks the next spring; regular cuttings thereafter. All varieties are prized for canning as well as freezing. Rhubarb roots can be shipped outside the Continental U.S. only at the customer's risk.

6914 MacDonald Stalks are of very fine quality, excellent flavor, and brilliant red color; the skin is tender and peeling is not required. Sauces or pies have a pleasing, rich pink color. 2 roots for \$1.60; 5 for \$3.75; 10 for \$6.80

6918 Valentine Stalks are of an attractive, deep red color, 18 to 22 in. long, 1 to 1½ in. broad and 1 in. thick. They are of deliciously sweet flavor and of supreme quality. 2 roots for \$1.90; 5 for \$4.50; 10 for \$8.50

Pkt. 20¢; oz. 35¢; ¼ lb. 90¢; ½ lb. \$1.25

TAMPALA OR FORDHOOK SPINACH

5341 Valuable "green" that stands hot weather. Within 6 to 8 weeks from sowing, Fordhook Spinach is ready to use when entire plants make the most delicious "greens" either raw as a salad or cooked like spinach. The young leaves are so tender they require only a few minutes to cook; stems may be cooked like asparagus, their flavor like artichokes.

As a cooked, canned or quickly frozen "green," Fordhook Spinach is, in the opinion of many, superior to regular spinach or Swiss Chard—more appetizing color, more delicious flavor, shrinks very little, holds its dark green color better and is easier to prepare for use fresh or frozen.

Pkt. 25¢; ¼ oz. \$1.00; oz. \$3.00

SORREL

5309 Narrow Leaved 60 days. Excellent in salads, for flavoring soups, or it may be cooked like spinach. Leaves are long, bright green with bitter-sweet flavor. Cutting may begin in about two months after sowing the seed. Being hardy, plants will continue to produce leaves for 3 or 4 years.

Summer SQUASH

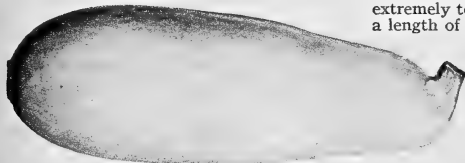

In descriptions we give the average size of fruits when fully grown. For the best eating, summer squashes are used while very young and tender; in fact, Early White and Crystal Bell are delicious if cooked whole when very tiny—an inch or more across. Generally speaking, a summer squash is too old for good eating when the thumb nail does not readily pierce the skin without pressure. Varieties of bush-like growth take up much less space in the garden than the running kinds and are especially adaptable for the small garden; Cocozelle and Zucchini are very popular bush types. A pkt. of seed will plant 8 to 10 groups; an oz. 30 to 40 groups or so-called "hills."

Fall and Winter SQUASH

The fall and winter squashes produce hard-shelled fruits which may be stored for use during the winter. Valuable for baking, boiling, making pies, etc. Many of the varieties here listed make excellent "pumpkin" pie and some are canned extensively for that purpose. Unlike summer squashes, fruits of the fall and winter varieties must remain on the vine until fully matured; gather them before frost, leaving part of the stem attached to the fruit. Handle carefully and avoid bruising. Easily stored in any dry place. Keep best if temperature of 70 to 75° F. is maintained for a week or two after which it should be held at 45 to 50° F. A pkt. of seed will plant 6 to 8 groups, an oz. 20 to 30 groups or "hills."

Burpee's Lawn Grass Seed

SHIPPED PREPAID ANYWHERE IN THE U. S.

The best time to start your lawn, or to repair it, is during the cool weather of early spring or in early fall. Why not plan now to have a luxuriant lawn that will add to the beauty of your home?

The Burpee leaflet, "GN 43 Construction and Maintenance of the Lawn," will be sent free upon your request. For new lawns, sow 1 lb. of grass seed to 200 sq. ft. of space; use 100 to 150 lbs. per acre. 1 lb. MERION Kentucky Bluegrass is enough for 500 to 750 sq. ft. To improve old lawns, use half of these quantities.

Some of the most beautiful flowering and foliage plants are grown from bulbs or roots. We offer on this and the following pages a most select assortment of the finest, easy-to-grow kinds, some, such as *Dahlias*, *Gladioli*, and *Lilies*, for outdoor culture, others for growing indoors and some for either indoor or outdoor culture. All are of high quality and have been tested on Burpee's Fordhook Farms.

Easy "How to grow" directions are sent with every order. At prices quoted, all Flower Bulbs and Roots are sent prepaid in the U. S. If to be sent outside continental U. S. they are sent only at the customer's risk.

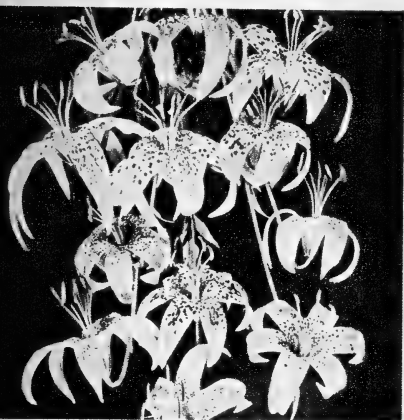

Hardy Garden Lily Bulbs

Easy to grow in any good, well-drained garden loam to which has been added a generous quantity of leaf mold. Once established they will increase in beauty each year. Most all lilies delight in a sunny location, but it is advisable to mulch so that the hot sun does not reach the soil around the base of the plant. All varieties offered are

highly decorative in the garden. Lily bulbs differ greatly in size according to variety—some 1 in. across, others 3 in. or more; we supply the sizes which will give the best results. We do not recommend Hardy Lily bulbs for house culture. Gloriosa Lily, which is perennial only in frost-free localities, may be grown in pots.

Regal Lily

Large trumpet-shaped, white, sweet-scented flowers with a touch of canary-yellow in the throat and a shading of lilac-pink on the outside. Clusters of blooms at the top of tall, wiry stems during July. One of the most beautiful and easiest grown of all lilies. 3 to 5 ft.

Lily, Bellingham hybrids

Enchantment Lily

7242 Regal, Extra Large Bulbs Will produce more flowers per plant and taller spikes the first year than the large bulbs will produce. 60¢ each; 3 for \$1.65; 6 for \$3.10 12 for \$5.75; 25 for \$11.00

7249 Regal, Large Bulbs Shorter spikes with fewer flowers than the above—the size preferred by many for the largest number of flower spikes at low cost. At these low prices, a splendid opportunity is afforded you to plant this beautiful hardy garden lily in quantity. Plants from these bulbs will become more floriferous with age. 4 for \$1.00; 12 for \$2.75; 100 for \$20.00

7251 Regale album Same habit of growth as Regal; the flowers, however, are pure white. They are just as easy to grow, perfectly hardy, established plants having as many as 25 blooms to a stem. Flowers are large, funnel-shaped, and heavily scented. Bloom in July and grow 3 to 5 ft. tall. 60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75; 25 for \$11.00

Henryi or Yellow Show Lily

Orange Triumph Lily (umbellatum type)

7261 **Gloriosa Lily** (*Rothschildiana*)

A most unusual and fascinating garden lily in that it will climb if it has something nearby to which it may attach itself. Leaves are elongated, soft green with curling tendrils on the tips with which they cling to a fence, trellis, string or wire.

Gloriosa Lily is most exotic in color and shape. The petals are sharply recurved, brilliant red bordered golden yellow—a striking bicolor contrast, the red becoming darker as flowers age. Planted in full sun, the colorings are more brilliant but plants become stockier, shorter and the stems of less length. Blooms have remarkable keeping qualities so make wonderful cut flowers. They also make attractive pot plants.

Roots are entirely unlike any of the other lilies—they do not have scales but are somewhat like a small dahlia tuber, 4 to 6 in. long and a trifle thicker than a lead pencil. Plant in a horizontal position, 4 to 5 in. deep in full sun or semi-shade. They do best in a sandy soil, preferably on the acid side; it is essential that any soil in which tubers are planted be well drained. Not hardy except in frost-free sections.

\$1.25 each; 3 for \$3.50; 6 for \$6.50; 12 for \$12.50

*Gloriosa or
Rothschildiana Lily*

Hardy Garden Lily Bulbs, continued

7252 Speciosum album (*White Show Lily*) Large white blooms with golden green midrib, the frilly edged petals being attractively rolled back while the stamens and pistil curl out from the flower itself. A handsome, graceful, free blooming lily; August and September. 3 ft. and more tall.

75¢ each; 3 for \$2.10; 6 for \$4.00; 12 for \$7.50

7253 Speciosum rubrum (*Show Lily*) Beautiful white flowers suffused rose-pink and spotted crimson. The petals are gracefully reflexed. Blooms in August and September with four to ten flowers per stem; well established plants often have more. Grows 3 to 4 ft. tall. Universal favorite.

60¢ each; 3 for \$1.65; 6 for \$3.10; 12 for \$5.75

7255 Tenuifolium (*The Lovely Coral Lily of Siberia*) Small, nodding, deep coral-red flowers with strongly reflexed petals of waxy texture, borne during June and July on slender stems about 18 in. tall. Charming lily for border or rock garden; does well in any good, well-drained soil in a sunny location.

50¢ each; 3 for \$1.35; 6 for \$2.60; 12 for \$5.00; 25 for \$8.75

7256 Tigrinum fl. pl. (*Double Tiger Lily*) Bright salmon-red double flowers spotted purplish black. Showy blooms during August and September. Hardy and robust; grows anywhere in ordinary garden soil. The only double flowered lily that we list. 4 ft. and more tall. Nice for backgrounds.

50¢ each; 3 for \$1.35; 6 for \$2.60; 12 for \$5.00; 25 for \$8.75

7257 Tigrinum giganteum (*Giant Tiger Lily*) Erect, sturdy plants, 3 to 4 ft. tall with many large blooms of bright salmon-red densely spotted with purplish black; petals reflex and roll back most gracefully. Blooms in August and September. Very hardy. Easily grown; in fact, it is so widely grown in this country, that it is thought of as a native lily. Lasts for years.

45¢ each; 3 for \$1.20; 6 for \$2.30; 12 for \$4.50; 25 for \$8.50

POMPON DAHLIAS

Pompon Dahlias have always been favorites with flower lovers and dahlia fanciers. These smallest of all dahlias combine so many pleasant features that they justly deserve a place in every garden. They grow most freely, require little care after planting, and bring forth a wealth of blooms, rewarding the grower with a generous supply of gorgeous cut flowers during the late summer and fall. Plants are of stocky growth, quite branching and extremely free flowering. Nice for borders; invaluable for table decoration, as they keep in good condition for a long while after cutting.

Dahlias are Lovely for Cutting

They will last longer if, after they are cut, the lower leaves are removed and the stems plunged in water as hot as the hand can bear. When the water cools, put flowers in a container of cold water. Cut dahlias should be kept away from heat and drafts.

Gladiolus Bulbs

Burpee's famous gladiolus are grown and admired wherever beautiful flowers are known. They make attractive displays in the garden, planted either in beds or in groups here and there in perennial or annual borders and are ideal for house decoration. If the spikes are cut when the bottom flower shows color, all the buds, clear to the top, will open. Burpee's Gladiolus Bulbs are easily grown in any good, well-drained soil in a sunny location.

The gladiolus bulbs that we offer are large, $1\frac{1}{2}$ in. and more across and will produce the largest flowers and the tallest spikes. All Burpee bulbs are guaranteed to bloom or your money back. We offer an extra choice selection of named varieties on this and the opposite page—old favorites and best of the new varieties.

You may order 25 bulbs or more of the same variety at the 100 rate.
